You asked

What companies have I worked for?

You've worked as a Senior SRE at Amazon Web Services¹
and previously as a DevOps Engineer at Google Cloud².

Confidence 

resume.pdf · p.1

— THE PROBLEM

Finding one fact shouldn't take fifteen minutes.

Long contracts, reports, spreadsheets, resumes — the answer is usually in there somewhere. Getting to it means skimming, Ctrl+F guesses, and hoping you didn't miss the right page.

01

Slow to search

Keyword search only finds exact words — not the answer phrased a different way.

02

Easy to miss things

A detail buried on page 40 of a report rarely gets read at all.

03

Hard to trust a summary

A quick answer is only useful if you can check exactly where it came from.

— HOW IT WORKS

Upload, ask, verify — that's it.

No setup, no training a model on your files. ClickAI reads the document once, then answers plain-English questions grounded entirely in what's actually in it.

1

Upload a document

Drop in a PDF, Word file, spreadsheet, or webpage
— desktop or browser.

2

Ask in plain English

"What's the termination clause?" "List the Q3 numbers." No special syntax.

3

Get a cited answer

Every answer links back to the exact page or section it came from.

— DATA HANDLING

Your files never stick around.

Built to be safe with sensitive material by default — nothing is kept longer than it takes to answer your question.

No database

Never written to permanent storage

Documents are processed in memory and a temporary session folder only — nothing lands in a persistent database.

Auto-wiped

Cleared the moment your session ends

Close the tab, refresh the page, or quit the app — everything you uploaded is deleted immediately.

On demand

Or clear it yourself, any time

One click removes every uploaded document and its conversation, whenever you want — no waiting on a session to end.

— WHAT IT DOES WELL

Built to be trustworthy, not just fast.

- **Never guesses**

If the document doesn't cover it, ClickAI says so — instead of making something up.

- **Verifiable citations**

Every claim links to the real excerpt and page it came from, not just a number.

- **Confidence you can see**

Each answer shows how confident the model actually is — no false certainty.

- **One document, one conversation**

Upload several files and keep a separate, focused thread per document.

- **Reads tables properly**

Spreadsheet and HTML tables keep their headers, so numbers stay meaningful.

- **Desktop or browser**

A native Mac app for quick lookups, or a web version for anywhere else.

— WHERE IT'S HEADED

Already useful today — and still growing.

● Desktop app

● Web app

- Removing a single document without clearing everything
- Packaged, signed installers for easy sharing
- Support for scanned / image-based PDFs

Try it on something real

Bring a contract, a spreadsheet, or your own resume — ask it a question you'd normally have to dig for the answer to.
